Reassuringly prepared

Protected Profits funds for Sterling Investment Bond, Sterling ISA and Investment Account

Questions and answers

This document has been produced to provide greater detail on how the Protected Profits funds work.

**All Protected Profits funds**

Q: What protection will my client get when they invest?

A: New clients investing in a Protected Profits fund will buy units at the current unit price. The protected price, below which the Protected Profits fund unit price aims not to fall, is set at fund level. The level of protection your client receives therefore depends on the difference between the current unit price and the protected price at the time they invest.

For example, if the highest-ever unit price (bid price) is 500p, the Protected Profits fund aims not to fall below the protected price of 400p (i.e. 80%).

- A client investing when the unit price (bid price) is 470p and the protected price is 400p, has effectively 85.1% protection.
- A client investing when the unit price (bid price) is 440p and the protected price is 400p, has effectively 90.9% protection.

These examples assume there is no bid/offer spread in the unit price, and the client receives 100% allocation.

Clients investing when the unit price is below the highest-ever unit price will have a lower exposure to the equity portfolio in the Protected Profits funds than if the unit price was at the highest-ever level when they invest.

Q: Do charges affect the protection?

A: The protection is on the Protected Profits fund’s unit price, not on your client’s original investment. This means that any charges taken directly from your client’s plan (by initial charge or ongoing charges taken by unit deduction) or withdrawals, will reduce what they get back and may result in them getting back less than 80% of their original investment.

For example, if the highest-ever unit price (bid price) is 480p, the Protected Profits fund aims not to fall below the protected price of 384p (i.e. 80%).

A client investing £100,000 when the offer price of the fund is 500p and the bid price of the fund is 475p will purchase 20,000 units. The value of these units after purchase is now £95,000 and the client has a protected value of £76,800 (20,000 units * 384p). This is equivalent to a protection level of 76.8% of the client’s original investment.

If after a year the bid price of the fund is the same (475p), but the number of units has been reduced to 19,800 units due to product charges, then the client will now have a protected value of £76,032 (19,800 units * 384p). This is equivalent to a protection level of 76.0% of the client’s original investment.

The protected price of the fund has remained the same. However, the ‘protected value’ has now reduced due to a reduction in the number of units.
Q: Can the protection fail?

A: Yes, the protection is not guaranteed and the unit price could fall below 80% of the highest-ever unit price in certain extreme circumstances. Please see the funds guides and the individual Protected Profits fund product leaflets for more detail.

Q: Do the Protected Profits funds have any exit penalties?

A: No, the Protected Profits funds do not have any exit penalties. Your clients can switch in and out of the Protected Profits funds as with any other fund. However, the underlying product wrapper may have exit penalties. Please refer to the relevant product Terms & Conditions for more information.

Q: What are the charges/expenses on the Protected Profits funds?

A: The Protected Profits funds are inclusively priced to include all fund management charges and fund expenses, which are fully disclosed. The current Total Expense Ratios (as at November 2017) are as follows:

<table>
<thead>
<tr>
<th>Fund Type</th>
<th>Total Expense Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sterling ISA and Investment Account</td>
<td>0.99% p.a.</td>
</tr>
<tr>
<td>Multimanager Protected Profits</td>
<td>0.99% p.a.</td>
</tr>
<tr>
<td>Tracker Protected Profits</td>
<td>0.70% p.a.</td>
</tr>
<tr>
<td>Threadneedle Protected Profits*</td>
<td>0.98% p.a.</td>
</tr>
<tr>
<td>Sterling Bond – High Allocation, Standard and No Exit Penalty versions</td>
<td>1.98% p.a.</td>
</tr>
<tr>
<td>Sterling Multimanager Generation 2 &amp; 3 Protected Profits</td>
<td>1.98% p.a.</td>
</tr>
<tr>
<td>Sterling Multimanager Protected Profits</td>
<td>1.84% p.a.</td>
</tr>
<tr>
<td>Schroder European Opportunities</td>
<td>1.73% p.a.</td>
</tr>
<tr>
<td>Schroder Core UK Equity</td>
<td>1.55% p.a.</td>
</tr>
<tr>
<td>Sterling Tracker Protected Profits **</td>
<td>1.55% p.a.</td>
</tr>
<tr>
<td>Sterling Bond – Flexible version</td>
<td>0.98% p.a.</td>
</tr>
<tr>
<td>Sterling Multimanager Generation 2 &amp; 3 Protected Profits 2</td>
<td>0.98% p.a.</td>
</tr>
<tr>
<td>Schroder European Opportunities</td>
<td>0.86% p.a.</td>
</tr>
<tr>
<td>Schroder Core UK Equity</td>
<td>0.57% p.a.</td>
</tr>
</tbody>
</table>

The Total Expense ratio quoted above for the Sterling Investment Bond (High Allocation, Standard and No Exit Penalty versions) includes the 1% p.a. product charge. The product charge for the Flexible version (series 2) funds of the Sterling Investment Bond is taken by unit deduction.

**Sterling Tracker Protected Profits closed to new customers in March 2017 (please note that Sterling Tracker Protected Profits 2 is open to new customers).

Q: Where can I find the latest asset splits?

A: The latest asset splits for all Protected Profits funds can be found in the fund factsheets available on Fundzone at www.zurichintermediary.co.uk, along with performance history of each fund.

Q: Are the Protected Profits funds covered by the Financial Services Compensation Scheme?

A: The protection is not guaranteed and the unit price could fall below 80% of the highest-ever unit price if the financial company providing the protection does not make the payments it has agreed to, or becomes insolvent. If this happens, it is unlikely your client will be able to claim under the Financial Services Compensation Scheme.

Q: What is the strategic asset mix of the equity funds used in the Multimanager Protected Profits funds?

A: The Multimanager Protected Profits funds have exposure to a range of actively managed equity funds. Every three months, the mix of the actively managed equity funds is set to:

- Newton UK Income 30%
- Threadneedle UK 24%
- Janus Henderson European Selected Opportunities 13%
- JPM US 9%
- Schroder European Opportunities 7%
- Schroder Core UK Equity 6%
- UBS US Equity 6%
- Legg Mason IF Martin Currie North American 5%

This gives exposure to the following geographic regions of UK (60%), Europe (20%) and North America (20%).

Q: What is the strategic asset mix of the equity index tracking funds used in the Tracker Protected Profits** funds?

A: The Tracker Protected Profits funds have exposure to a range of equity index tracking funds. Every three months, the mix of the equity index tracking funds is set to:

- HSBC FTSE All Share Index Fund 60%
- HSBC European Index Fund 20%
- HSBC American Index Fund 20%

This gives exposure to the following geographic regions of UK (60%), Europe (20%) and North America (20%).
Q: What is the strategic asset mix of the equity funds used in the Threadneedle Protected Profits and Sterling Protected Profits* funds?

A: The Threadneedle Protected Profits and Sterling Protected Profits funds have exposure to a range of Threadneedle equity funds:

- Threadneedle UK Institutional 60%
- Threadneedle American 15.5%
- Threadneedle European 13.5%
- Threadneedle European Select 6.5%
- Threadneedle American Select 4.5%

This gives exposure to the following geographic regions: UK 60%, Europe 20%, North America 20%.

Q: What is the difference between the Sterling Multimanager Protected Profits fund, the Sterling Multimanager Generation 2 Protected Profits fund and the Sterling Multimanager Generation 3 Protected Profits fund?

A: The Sterling Multimanager Protected Profits fund was launched in January 2005. The Sterling Multimanager Generation 2 Protected Profits fund was launched in March 2009. The Sterling Multimanager Generation 3 Protected Profits fund was launched in November 2011. The Generation 2 and 3 funds work in exactly the same way as the original Sterling Multimanager Protected Profits fund. However as they were launched at a later date they have a different protection level and exposure to the equity funds.

Q: How is the mix between the equity funds and the BlackRock Institutional Sterling Liquidity fund determined?

A: The mix between the equity funds and the BlackRock Institutional Sterling Liquidity fund is determined by multiplying the percentage difference between the current unit price and protected price by a factor, which is usually set to 3.5.

For example, at its maximum 70% exposure, the equity funds weighting would be calculated as follows:

\[
\text{Equity Weighting} = \text{Factor} \times \text{Gap}
\]

There is also a tolerance level applied to changes in the mix between the equity funds and the BlackRock Institutional Sterling Liquidity fund as the unit price rises and falls to avoid the Protected Profits fund having to make small daily changes to the proportion allocated to the equity funds. This reduces the level of transaction costs incurred by the Protected Profits funds that would otherwise have an adverse affect on the investment performance of the fund and does mean that the actual asset mix on a given day may not be exactly the same as the above formulae might indicate.

Q: What is the VIX?

A: The VIX is the short name, or ticker symbol, for the Chicago Board Options Exchange Volatility Index, a measure of the implied volatility of the American S&P 500 stock market index. The VIX has been referred to as the ‘fear index’. It is a measure of the market’s expectation of volatility on the index in the next 30 days. No UK equivalent of the VIX currently exists.

Q: What is the VDAX?

A: The VDAX is the ticker symbol for the Deutsche Börse VDAX Volatility Index, which measures implied volatility of the German DAX stock market index. It is a measure of the market’s expectation of volatility on the index in the next 30 days. No UK equivalent of the VDAX currently exists.

Q: Why are corporate and charity investments only allowed to invest into the Multimanager or Tracker Protected Profits funds via the Sterling Investment Account?
A: Corporate and charity investors are able to reclaim tax on any unfranked income paid by a fund. The Multimanager and Tracker Protected Profits funds use Medium Term Notes which do not produce any income and therefore these are the only funds we allow corporate and charity investments to invest in, as Sterling is unable to provide a split between the level of franked and unfranked income on any income paid by other funds available through the Sterling Investment Account.

Q: What is a Medium Term Note? (Sterling ISA and Investment Account only)
A: In respect of the Protected Profits funds available on the Sterling ISA and Investment Account, the customer buys a Medium Term Note (MTN) issued by Barclays Bank plc. A Medium Term Note (MTN) is a type of loan to a bank. In return the bank agrees to make payments based on the terms of the loan.

The MTN payments are based on the return of the relevant range of equity funds (i.e. as outlined previously) and the BlackRock Institutional Sterling Liquidity fund. The MTN is not invested in the underlying funds. The investment return on the MTN is paid by Barclays Bank plc, who also protect the unit price from falling below 80% of its highest-ever unit price.

If Barclays fails to meet its agreed payments or becomes insolvent, the customer could lose some or all of their money. If this happens it’s unlikely the customer could make a claim under the Financial Services Compensation Scheme.

Q: Does using a Medium Term Note impact my client's tax position? (Sterling ISA and Investment Account only)
A: No, the funds have been designed such that the Medium Term Note is taxed in the same way as an OEIC.

If you have any further questions on our range of Protected Profits funds, please contact your Zurich consultant on 08085 546 546.

We may record or monitor calls to improve our service.
